

INVESTOR PITCH

Ordomatics

AI-powered WhatsApp & Odoo ERP.

Fully managed.

THE PROBLEM

ERP is heavy. Customers are on WhatsApp.

Legacy complexity

Traditional ERPs are expensive, need large tech teams and have a steep learning curve.

Disconnected channels

Customers and staff live on WhatsApp, while business data is trapped in back-office systems.

The AI gap

Most AI is a chatbot, not an operational brain that actually does the work.

THE SOLUTION

A fully managed, AI-native ERP.

WhatsApp-first

No forms, no portals. Chat with an AI agent to set up your business assistant in minutes.

AI-native Odoo 18

Accounting, CRM and Inventory with a built-in modular LLM suite.

Operational AI

It executes: imports invoices, generates marketing images and manages customer threads.

MARKET

Ripe for a managed, chat-first player.

\$64B+

Global ERP market, and growing.

200M+

Monthly active users on WhatsApp Business.
Commerce is moving from web-first to chat-first.

SMEs

Want Enterprise Odoo power but lack the DevOps expertise to run it securely.

TECHNOLOGY

Built to run itself.

Modular LLM suite

Provider-agnostic: OpenAI, Anthropic, Mistral and local models.

Deep WhatsApp integration

Custom WhatsApp Business Account management, webhooks, threading and status tracking.

Declarative infrastructure

Kubernetes, GitOps with ArgoCD and Crossplane: every deployment is version-controlled.

Knowledge & storage

PostgreSQL with pgvector for RAG knowledge bases; S3-compatible object storage for attachments.

BUSINESS MODEL

Recurring revenue that scales with usage.

Tiered SaaS

From lite “WhatsApp AI” to full managed ERP + AI.

Credits-based AI

Revenue tied to LLM usage and automated task execution.

Platform-as-a-Service

Developers bring their own infrastructure or scale on ours.

TRACTION & ROADMAP

Live in production, onboarding clients.

Today

Deployed on Odoo 18 with a multi-environment pipeline (dev, staging, prod). Public entry point at ordomatics.com.

Next

Scale client onboarding on the production cluster and expand the tool ecosystem for industry-specific automation.
